Education

SIES Graduate School of Technology
B.E. in Artificial Intelligence and Data Science

Navi Mumbai, India
2023 – 2027

Experience

Freelance Full Stack Developer

April 2026 – Present

- Developed and deployed a full-stack B2B website for Abzo, enhancing the company's digital presence and product visibility.
- Led end-to-end development, including requirement gathering, UI/UX design, backend implementation for email and WhatsApp inquiries, and production deployment on Hostinger.

Full Stack Developer Intern – Hara-XY Innovation Lab

Jan 2026 – April 2026

- Developed authentication and session management features for Devare, implementing JWT-based login/registration, Google OAuth, and protected route middleware using Node.js and Express.js.
- Built RESTful APIs for todo management, user settings, and profile management, with comprehensive endpoint testing using Postman and cURL.
- Contributed backend services for LocalBeat, a local news aggregation platform, integrating external news sources and collaborating through Git-based workflows, feature branches, and pull requests

Projects

FRA Atlas & WebGIS-DSS | React, Node.js, PostgreSQL, Python, YOLOv8, OpenCV, Leaflet.js, OCR

- Built an AI-powered platform to digitize Forest Rights Act land records, addressing challenges in managing **45+ lakh pending tribal land claims**.
- Developed an OCR pipeline to extract text and GPS coordinates from handwritten land documents, converting unstructured records into a searchable database.
- Engineered a WebGIS mapping layer using Leaflet.js to visualize land boundaries and detect spatial overlaps for automated dispute identification.
- **Awarded 2nd Place** at a National-Level Project & Idea Presentation Competition.

AIOps-Based Failure Detection & Root Cause Analysis Engine | Python, Isolation Forest, SVM, TF-IDF, Docker

- Designed and implemented an AI-driven log intelligence system for Dockerized microservice environments, combining anomaly detection and failure classification.
- Applied Isolation Forest and SVM models with TF-IDF feature engineering to identify anomalies and classify failures from production-style logs.
- Correlated events across application, API, and database services to infer root causes and generate explainable remediation reports.

Wildlife Conservation & Population Monitoring System

Python, YOLOv8, OpenCV, React, Node.js, PostgreSQL, Leaflet.js, GIS

- Developed an AI-powered wildlife monitoring platform integrating camera trap imagery, satellite data, and GIS feeds to analyze population trends.
- Implemented YOLOv8-based species detection and classification to generate population growth metrics and conservation risk scores.
- Built a real-time dashboard for habitat monitoring, decline forecasting, and conservation reporting.
- **Received Special Mention (4th Place)** at a National-Level Project Showcase Competition.

Technical Skills

Technical Skills: Python, Java, C++, JavaScript, Solidity | React.js, FastAPI, Flask | PostgreSQL, MySQL, Firebase | Scikit-learn, Pandas, NumPy, OpenCV, LangChain | Git, GitHub, Postman, Docker.

Achievements

Training and Placement Co-ordinator (2025- Present)
